

NinjaTrader Indicator Upgrade – Absorption Phase 2 (GC Focus)

This document provides a clean, consolidated specification for upgrading the existing SupplyDemandZonesPROGC indicator. The goal is to improve signal quality, reduce false positives (especially on NQ), and enhance trade timing for GC 1-minute trading.

1. Expose User Parameters

Convert hardcoded variables into NinjaScript properties so they can be adjusted from the UI.

```
[NinjaScriptProperty]
[Range(1.0, double.MaxValue)]
public double VolumeThresholdMultiplier { get; set; } = 1.5;

[NinjaScriptProperty]
[Range(1, int.MaxValue)]
public int VolumeLookback { get; set; } = 20;
```

2. Volume Filter

```
double avgVolume = SMA(Volume, VolumeLookback)[0];
bool highVolume = Volume[0] > avgVolume * VolumeThresholdMultiplier;
```

3. Absorption Logic (Existing - Keep)

Keep current absorption logic based on zone interaction, volume, and wick structure.

4. ADD Momentum Confirmation (NEW - Critical)

Prevents false signals by requiring directional shift.

```
bool bullishShift = Close[0] > Open[0] && Close[0] > Close[1];
bool bearishShift = Close[0] < Open[0] && Close[0] < Close[1];
```

5. Integrate Momentum into Signal Conditions

```
if (z.Type == "Demand")
{
    if (bullishShift && lowerWick > body)
    {
        Draw.ArrowUp(this, "BUY_" + CurrentBar, false, 0, Low[0] - TickSize * 2, Brushes.Lime);
    }
}

if (z.Type == "Supply")
{
    if (bearishShift && upperWick > body)
    {
        Draw.ArrowDown(this, "SELL_" + CurrentBar, false, 0, High[0] + TickSize * 2, Brushes.Red);
    }
}
```

```
}  
}
```

6. Retest Filter (NEW - High Impact)

Only allow signals on fresh zones.

```
if (z.Retests > 2)  
    continue;
```

7. Optional Alerts

```
Alert("AbsorptionBuy", Priority.Medium, "BUY Signal", NinjaTrader.Core.Globals.InstallDir + @"\sound  
Alert("AbsorptionSell", Priority.Medium, "SELL Signal", NinjaTrader.Core.Globals.InstallDir + @"\sou
```

8. Notes for Coder

- Do NOT duplicate class definitions - Integrate within existing zone loop - Preserve current functionality - Ensure unique draw tags (use CurrentBar) - Test on GC 1-minute chart
