

How to create a New Client Template (GoHighLevel)

This assumes you are building inside GoHighLevel.

PHASE 1 — Build the Base System (Once)

This is your master template. Inside a test sub-account, build:

1. Core Assets

- One **Service Booking Calendar**
- One **Primary Pipeline**
- One **Main Form**
- Required Tags
- Required Workflows

Keep everything generic.

Example naming:

- Main Booking
- New Leads Pipeline
- Form - Contact
- Tag - Source Missed Call

Never hardcode:

- client name
- client phone number
- client email
- specific branding text

Everything must stay reusable.

2. Core Workflows (Template Set)

You already built the correct structure. Your master template should include:

Workflow A:

Missed Call → SMS → Booking Link

Workflow B:

Form Lead → SMS → Booking Link

Workflow C:

Booking Confirmation

Workflow D:

Appointment Reminder

These 4 are your core automation engine.

PHASE 2 — Convert To Snapshot (Template Export)

Once everything is built and tested, go to:

Settings → Snapshots

Create a new Snapshot.

Include:

- Workflows
- Forms
- Pipelines
- Calendars
- Tags
- Custom Fields
- Email Templates
- SMS Templates

Do not include:

- Contacts

- Opportunities
- Live data

This snapshot becomes your reusable system.

PHASE 3 — Deploy To New Client

When onboarding a new HVAC client:

Step 1: Create new sub-account.

Step 2: Apply your Snapshot.

This automatically imports:

- All workflows
- Pipelines
- Forms
- Calendars
- Tags

Now you don't rebuild anything.

PHASE 4 — Client-Specific Setup

After snapshot import, you need to only adjust:

1. Phone Number

- Connect their number
- Complete A2P registration (if US)

2. Calendar Availability

- Assign their staff
- Enable "Available for Booking"

3. Booking Link Placement

- Add link to:
 - Website
 - SMS templates
 - Ads

4. Update Branding (If Needed)

- Email footer
- Business name
- Signature

Nothing else changes.

TEMPLATE DESIGN RULES

To make templates reusable:

1. Use Custom Values

Instead of writing client names in messages, use:

- {{location.name}}
- {{contact.first_name}}
- Custom booking link fields

This prevents hardcoding.

2. Avoid Client-Specific Tags

Use generic tags like:

- source_missed_call
- source_form
- status_booked

3. Keep One Pipeline Structure

Example:

- New Lead
- Contacted
- Booked
- Completed
- No Response

Same for every client.

Recommended Standard HVAC Template Structure

Here is the clean version you should reuse:

Assets:

- 1 Pipeline
- 1 Booking Calendar
- 1 Contact Form
- 1 Missed Call Workflow
- 1 Form Workflow
- 1 Booking Workflow
- 1 Reminder Workflow

That's it. No complexity.

How To Clone For Each New Client

1. Create sub-account
2. Apply Snapshot
3. Connect phone number
4. Complete A2P

5. Assign staff to calendar
6. Update booking link in messages
7. Test

Done.

Advanced Version (Later)

Once stable, you can add:

- AI chat agent
- Voice AI
- Automated review requests
- Reputation management
- Re-engagement campaigns

But base system should stay simple.
